DETAILED ACTION

1. Claims 11-21 are currently pending.

Election/Restrictions

2. Applicant's election with traverse of Group I, claims 11, 12 and 21 in the reply filed on March 10, 2008 is acknowledged. The traversal is on the ground(s) that a search of the composition would include a search of the process claims. This is not found persuasive because while the searches might overlap to some degree, they are not necessarily coextensive.

The requirement is still deemed proper and is therefore made FINAL.

3. Claims 13-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on March 10, 2008.

4. Claims 11, 12 and 21 are examined on the merits.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 11 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. These claims are indefinite because it is unclear what characteristics a

substance must have in order to be considered an "active" substance. Thus, it is unclear exactly how much OPC A2 is required in the composition.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 11 and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Pauly et al. (WO 02/089758 - US 2004/0234480 is the English translation of WO '758. The translation will be referred to in the rejection).

Pauly teaches a composition comprising a Litchi chinensis extract that contains proanthocyanidin A2 (OPC A2) (see claims). L. chinensis is synonymous with L. sinensis (see <http://www.rootdown.us/Li-Zhi-He>). The extract inhibits matrix metalloprotease (see page 12, Table 5). The extract can contain up to 95% of the proanthocyanidin A2 (see paragraph 29). The composition contains carriers suitable for cosmetic or oral administration (see pages 3-10)

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 11 and 12 rejected under 35 U.S.C. 103(a) as being unpatentable over Pauly.

The teachings of this reference are discussed above. The reference does not specifically teach a composition with 20 to 25% proanthocyanidin A2. However, "[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." In re Aller, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). The reference teaches that the ingredient can be present in any amount from 5 to 100% by weight. The reference also teaches that a person of ordinary skill in the art would possess the knowledge and ability to modify the extraction parameters to produce an extract that has a desired concentration. Therefore, the artisan would have been motivated to modify the reference extract to produce an extract with the proanthocyanidin A2 concentration claimed by applicant. Thus, absent some demonstration of unexpected results from the claimed parameters, this optimization of proanthocyanidin A2 amount would have been obvious at the time of applicant's invention.

8. No claims are allowed.
